Neoflon Pfa Af-2400 is a fluoropolymer film with about the same characteristics as PTFE.

Introduction
- Neoflon Pfa film is smooth high-performing non-stretch film which is formed by melt extrusion with Neoflon Pfa material.
- Neoflon Pfa film has a molecular structure in which a principle chain consisting of atoms of carbon and fluorine is combined with the perfluoroalkoxy group, to give outstanding heat and chemical resistance, nonadhesion, and nonflammability.
- It also possesses fabricating characteristics including sealing, thermoforming, welding and heat bonding as well as adhesion (surface treatment items).

Handling/Safety information
- Be sure to read the notes on SDS and labels before use.
- This product is intended for general industry, and therefore its adequacy and safety as a raw material for medical purposes cannot be guaranteed.

Packaging
- The product is rolled on a paper core, hung with a protector at both ends, and packed in a carton box.
