NEOFLON PFA AP-210 is excellent in melt flowability and is suitable for injection molding and extrusion molding.

Introduction
- AP-210 is a copolymer of tetrafluoroethylene and perfluoroalkyl vinyl ether.
- **Good melt flowability** while maintaining excellent properties of PTFE. It can be melt-molded as a thermoplastic resin by **injection molding** and **extrusion molding**.
- **Excellent chemical resistance** which is not affected by most of the chemicals.
- **Excellent heat resistance**. Continuous use temperature is 260 °C.
- It retains flexibility without losing toughness under the environment from cryogenic to high temperature.
- **Low dielectric constant and dielectric loss tangent** in a wide range of temperature and frequency.
- It shows high electrical resistance and dielectric strength.
- **Nonflammable** like POLYFLON PTFE and NEOFLON FEP.
- **Excellent weather resistance**. No properties change even when exposed outside for a long time.
- Non-stickiness. It shows excellent releasability and water repellency / oil repellency.

Handling method / Safety information
- Be sure to read the notes on SDS and labels before use.
- This product is intended for general industry, and therefore its adequacy and safety as a raw material for medical purposes cannot be guaranteed.

Packing specification
- 25Kg
