NEOFLON PFA AP-230SH is a high purity PFA with fully fluorinated. It is excellent in melt flowability. It is suitable for chemical liquid tubes of semiconductors by extrusion molding.

Introduction
- AP-230SH is a copolymer of tetrafluoroethylene and perfluoroalkylvinylether.
- High purity PFA with terminal groups fully fluorinated.
- **Good melt flowability** while maintaining excellent properties of PTFE. It can be melt-molded as a thermoplastic resin by **extrusion molding**.
- Suitable for extrusion molding and transfer molding. It is used for tubes, sheets and valve lining applications.
- **Less fluoride ions** due to the fluorinated terminal group.
- **Excellent chemical resistance** which is not affected by most of the chemicals.
- It retains flexibility without losing toughness under the environment from cryogenic to high temperature.
- **Excellent heat resistance**. Continuous use temperature is 260 °C.
- **Excellent weather resistance**. No properties change even when exposed outside for a long time.
- Non-stickiness. It shows excellent releasability and water repellency / oil repellency.

Handling method / Safety information
- Be sure to read the notes on SDS and labels before use.
- This product is intended for general industry, and therefore its adequacy and safety as a raw material for medical purposes cannot be guaranteed.
Packing specification
- 25Kg
